

A black and white photograph of a city park, likely Millennium Park in Chicago. In the foreground, there is a paved plaza with a low concrete wall and some people sitting on it. To the left, there is a large, leafy tree. In the background, several tall skyscrapers are visible, including the Prudential building on the right. The sky is clear.

SEPTEMBER 1964

FOREWORD

Chicago's Central Business District with its world-renowned retail complex is the nerve center of an eight-county metropolitan area whose total output on a Gross National Product Basis is \$28 to \$30 billion annually. Total value of property within the district exceeds \$1.6 million. Owners of this property pay more than 11 per cent of the City of Chicago's general tax revenues. Concentrated within the District are such major economic activities as merchandising, banking and finance, commerce and corporate management.

One cannot over-emphasize the importance of the Central Business District to the economic progress of the entire metropolitan area. And the District is growing steadily in importance and in value. In the period 1958-64 major building improvements completed or under construction total more than \$540 million. Projects totaling more than \$175 million have been announced for future construction.

A principal factor in the vigor and growth of the Central Business District is its accessibility from all parts of Chicago and most of the metropolitan area. Five of Chicago Transit Authority's rapid transit routes, operating on right-of-way either above or below street grade without interference from or to street traffic, service the District. Direct convenient service to or through the District is also provided by 56 of CTA's 139 bus routes. Unified by a broad transfer privilege, these two systems make it possible to reach the Central Business District from any part of Chicago, and 29 satellite communities.

Cordon counts of traffic entering and leaving the Central Business District disclose the tremendous importance of mass transit and commuter railroads in moving people to and from the District. For example, during the maximum morning rush hour (7:30 a.m. to 8:30 a.m.) on a typical weekday in May of 1963, 200,947 people entered the district by all forms of transportation. Of this total, 134,248 persons or 67 per cent, came by CTA rapid transit and commuter railroads on traffic-free rights-of-way; 15 per cent came by buses; 15 per cent by automobiles and 3 per cent by taxicabs and service vehicles.

The private automobile's share of this one hour part of the transportation job is only 30,722 people, but it requires 20,481 automobiles. In comparison, only 933 buses are needed to bring in 30,605 people in this maximum hour. This is conclusive evidence, then, that the private automobile is the major cause of rush hour congestion in the Central Business District.

If the private automobile alone were relied upon to perform this entire one hour segment of the weekday transportation chore, approximately 150 additional expressway lanes would be necessary. Assuming 8 lane expressways cost \$13,000,000 per mile, and an average length of ten miles would be required, these expressways, plus the garaging facilities for 111,000 automobiles, would cost the fantastic sum of about \$2.8 billion.

From these statistics, only one conclusion can be drawn: That mass transit, particularly the private right-of-way CTA rapid transit and the commuter railroads, are indispensable transportation life-lines of the Central Business District.

Chairman,
Chicago Transit Board
